What is Silent Conference?

It allows you to host several speakers or presentations in the same space without creating audio distractions for delegates. Using existing AV equipment or equipment provided by us, you can instantly transform a single space into multiple breakouts or presentation areas.

Do more with less

Use Silent Conference to have more speakers, presentations and languages all in one room.

Create dynamic, user-driven experiences

Delegates can choose which channel/presentation to listen to, switching across them instantly and seamlessly.

Achieve the optimal use of your time and space

Arrange your space in the most creative way possible, give each speaker more time to deliver quality content and never have to worry about noise restrictions.

The Benefits of Silent Conference

Up to 32 channels

With the largest channel selection in Australia, our solution can support conferences and events of any size.

Superior audio quality

Our state-of-the-art infrared audio system combined with premium BOSCH headphones means that delegates always receive clear digital audio quality without interference.

Uninterrupted audio

Our silent conferencing solutions deliver digital audio quality for more than 200 hours meaning delegates never miss a beat.

The Benefits of Silent Conference

Long battery life

Our infrared pocket receivers receive a full charge from the charging units after 105 minutes. A fully charged battery can last 200 hours.

Unlimited customisation

Our Silent conference equipment can be set up in all kinds of venues across all kinds of layouts. Make the most of your space while giving delegates a premium experience.

Expert support and advice

Our highly qualified staff will be there to support you throughout the event, from set-up to pack-down. With our support, you can rest easy knowing an expert is always on standby.

Choose your style of Silent Conference

Silent Theatre

Silent theatres create a fully immersive environment for your delegates by removing audio distractions. Allow delegates to engage without distracting other delegates watching the presentation. Noise restrictions will no longer be a problem. An example use is a theatre setup in an exhibition hall where delegates can watch the presentation in the theatre and listen to it exclusively without the presenter disturbing delegates having conversations in other parts of the exhibition.

Silent Breakout

Silent breakouts allow you to arrange multiple speakers to give parallel presentations in the same room. Delegates can switch between speakers instantly while removing noise interference from the other speakers. Give delegates the power to tune into speakers they want and content they're interested in. An example use case is a CEO who presents to all staff at the first session of the event, with Finance director, Marketing director and Operations director all presenting straight after and all at once. The audience just listens to their audio channel of interest.

Choose your style of Silent Conference

Speed Dating

Speed dating allows delegates to network and connect with many prospective presenters quickly, just like normal speed dating. Each presenter will have a station with a screen, microphone and a dedicated channel, allowing delegates to tune directly into their presentation for an immersed discussion while cutting out annoying background noise. Both ends will enjoy undivided attention when asking and answering questions.

Silent Tours

Silent tours allow multiple tours to be run in the same space at the same time without audio distraction, background noise and allows delegates to experience the tour fully immersed and at their own pace. Allow more delegates to experience your event and leave a much deeper impression on them.

Case Study: Blackdot

The Venue: Four Season Hotel

The Delegates: 400 Attendees

The Breakouts: 6 open breakouts

blackdot

It's silent safari for professionals!

Blackdot held six concurrent sessions focused around Marketing and Sales for industry leaders. Our Silent Conference solution supported the six simultaneous presentations in the Grand Ballroom.

Delegates were given a headset on arrival and selected the channel corresponding to the station they were seated at. Blackdot held 30-minute sessions, back to back, to allow speakers to educate the audience in a short amount of time.

Delegates chose from six different topics and speakers every 30 minutes. Without this solution, multiple breakouts are a costly alternative and without the concurrent sessions, the conference would have run over an entire day instead of a 2.5-hour time frame.

Silent Conference is to the benefit of the end client and the delegates, as your time is just as valuable as your attendees.

Case Study: Salesforce

The Venue: ICC Sydney

The Delegates: 2200+ Attendees

The Breakouts: 7 different areas

Salesforce World Tour!

Silent Conference enabled Salesforce to screen their presentations to delegates silently without being disturbed by the presentations simultaneously occurring side-by-side.

The Salesforce World Tour hit the ground running at Sydney's International Convention Centre. Over 130 presentations were scheduled for a single day in a single area. Silent Conference covered seven breakouts within the exhibition hall, removing the need for external breakouts. 2,225 Bosch Digital Receivers and headsets were installed in Breakouts A to G.

Our team worked alongside the AV team throughout the event to manage the receivers and answer any questions. After the event we were praised for our professional solution contributing to a successful event landscape.

Case Study: Schneider Electric

The Venue: ICC Sydney

The Delegates: 80 Attendees

The Breakouts: Two Different Tour Groups

Schneider Electric used Silent Conference to take two separate tour groups around an exhibition space without noise interference.

Each group was led by a presenter with a hand-held microphone, and the audio was transmitted to the headsets so that delegates could hear the presentation clearly.

The two groups made their way around the exhibition simultaneously, whilst not disturbing visitors from the public.

Using this solution allowed the presenters to clearly convey their message, and delegates to easily understand.

Case Study: Xero

The Venue: MCEC Melbourne

The Delegates: 4000 Attendees

The Breakouts: 4 Different Areas

Xero used Silent Conference to run four silent theatres side-by-side.

Delegates were seated at four different stations, each with a different presenter.

Participants were able to choose their desired session prior to the start, and then move to another session after it had finished.

The event ran over two days.

Ask us how you could use Silent Conference at your next event!
